*We are constantly adding to our inventory.  
 Please reach out to us if you don't see

While we do our best to research all of our products for use by organic growers, it is the responsibility of the farmer to determine if they pass USDA organic requirements before purchasing and using them. Some products that have OMRI or Nat'l List status can lose that standing at any time without notice. We are not responsible for products purchased that can not be used in certified OG operations. Check with your certifying agency for current status of a product. Not all of the products that we sell are registered in every state. It is your responsibility to comply with the laws of your state. Please check with your state department of agriculture if you are unsure.

## WIZARD VACUUM PLANTER

Wizard seed planters are highly user-friendly vacuum seeders with easy seed plate changes, spacing and depth adjustment, and crop changes without tools. The A30 steering handle is adjustable with a safety advancement lever, and the pneumatic drive wheels make transportation between fields easy. Spacing transmission and shoe height adjustment are easily accessible, and seed clean-up is made convenient by a plug at the bottom of the seed hopper. Wizard is one of the most user-friendly precision seed planters available.

Being self-propelled, the Wizard A series seeder is able to cover a lot of ground in a short amount of time. Planting upwards of 2 acres per day is possible with a single operator. Precision planting a wide range of seed sizes sets Wizard apart from similarly priced vacuum seeders which handle either small seeds or large seeds, but not both. Reasonably priced models means smaller operations, hobby farmers, research growers, etc. can now afford the precision vacuum seeding previously exclusive to large-scale commercial growers.

Ideal for planting in greenhouses or open field, Wizard planters are uniquely suited to plant small and large size seeds. The same Wizard seeder can plant small seed crops like carrots, onions, tomato, etc., up to larger seed crops like corn, beans, peas, etc.

Wizard A series units are equipped with a seed bed leveling plate that smooths the soil ahead of the shoe/coulter, assuring more accurate depth control. Row units can be spaced as close as 9.84" (25cm) apart.

## AGRITAPE HEAT MAT SYSTEM

The Agritape system includes a control unit, Agritape Heat Mat, and grounding screen that regulates soil temperature and safely grounds the current if the tape is damaged. The system doesn't work with GFCI outlets and uses black bars to create a continuous heat pattern. To install, place the mat and cover it with the ground screen, connect the ground wire from the control unit to the screen, and put the sensor in the soil of the seed tray or container. The Agritape can increase soil temperature up to 20°F above room temperature.

**Control Units:** Multi-outlet power strips can be used to add mats to a controller, however, DO NOT exceed amp rating or max amp of tape.

## MixRite

## MIXRITE SERIES FERTILIZER INJECTOR

Mixrite injectors are positive displacement water driven injectors. The adjustable dosing mechanism is driven by the flow of water, which creates a vacuum and draws the chemical into the water stream at the correct dilution ratio. This ensures precise and consistent mixing of chemicals with water, without the need for expensive and complicated metering equipment. They are self-priming and do not require any electricity or external energy source, allowing for easy installation and maintenance. There is constant concentration of additive no matter what pressure and flow. The TF models have adjustable injection rates.

**TF-5 MixRite** is a low to medium flow unit used for fertilizers, pesticides and other additives for farming and irrigation. Not

intended for strong acids and alkalis or solvents. Flow rates of .88 - 22 GPM. The TF-5 has 1" MPT inlet/outlet connections. Providing higher flow rates, less friction loss and longer life than comparable models.

**TF-10 MixRite** are designed for medium water flow for fertigation, pesticide, and other in-line additives. They are intended for typical fertilizers, pesticides, and agriculture or irrigation additives. Flow rates of 2 – 45 GPM. The TF-10 has 1.5" NPT threaded connections for in-line mounting. They are not designed for strong acids, alkalis, or solvents.

## TROUBLE FREE INJECTION OF FERTILIZERS

Mazzei injectors are high-efficiency, Venturi-type differential pressure injectors. A pressure difference between the inlet and the outlet of the injector creates a vacuum inside the body, which results in a suction through the suction port. The suction can then be used to inject and mix fertilizers and water treatment chemicals into the water. Mazzei injectors are trouble free because there are no moving parts, and have a long life since they are molded from chemical resistant polypropylene.

Mazzei non-proportional injectors are excellent for drip systems in fields or high tunnels, provided that fertilizer is based on rate/acre rather than PPM (constant feed). Take lb./Acre per week divided by number of applications for the week and mix it in with approx. 5 gallons of water

**Operating Instructions:** Mix and re-mix required fertilizer for irrigation cycle, start irrigation, allow pressure to stabilize in system, open the two PVC bypass valves and slowly close the brass mainline valve until the flow meter rises to the desired injection rate (GPH). Water pressure will drop 3-7 PSI dependent on flow and injection rate. When fertilizer container is empty it will draw air, but that is not harmful. Allow irrigation to operate for a while to ensure fertilizer is all out of the system.

**COMPLETE UNITS (AS PICTURED ABOVE)**  
 Injector unit with bypass mainline, 8' suction hose, (GPH) flow meter, back flow check valve, bypass valves, pressure gauge and brass gate valve to control injection rate (normally open).

## FLOW CONTROL PRESSURE COMPENSATING DRIP IRRIGATION TAPE

Toro Aqua-Traxx Flow Control gives you uniform output regardless of pressure changes caused by hilly terrain and long runs. Control how much water your plants receive by increasing or decreasing the operating pressure, 10-25 PSI. For uniform output you need 8-10 PSI at the highest point of the field. Multiple laser slit outlet reduces startup clogging & impedes root intrusion. 150 mesh filtration required.

One fogger should be used for every 2.5 square feet. The cross with four foggers will cover up to 10 square feet (3 – 4 feet wide).

Foggers should be installed at a height of 3 – 5 feet above the propagation material. The spacing between the fogger assemblies should be 3 feet. Multiple flow rates available for different precipitation rates.

**3'-4' Bench:** One line above the center.  
**6'-7' Bench:** Two lines with crosses are required.

To prevent dry edges on a single bench (no other benches within 2') the cross should not be further than 1' from the edge. In some instances two lines may be required on a 4' bench.

## SENNINGER® XCEL-WOBBLERS

The Xcel-Wobbler uses Senninger's offcenter rotary-action technology. It provides an extremely uniform and instantaneous application pattern over a large area at lower pressures, and with very low evaporative loss and wind drift. Wobblers are designed for nursery irrigation and frost protection. Wobblers installed in test bed withstood winds up to 25 MPH and temperatures as low as 18°. They are an excellent sprinkler for small diameters from 35 to 56 feet. The Xcel has less vibration than earlier models.

Connection: 1/1" MPT. Operating Pressures: 10 - 25 PSI. Space and stagger these sprinklers at 30% less than listed dia. for uniform coverage.

## GREENHOUSE TOMATO TRELLIS

Galvanized steel

Are you tired of extending tomato stakes when your plants outgrow them? This is a labor-saving device for trellis greenhouse tomatoes. Designed with determinate tomato plants in mind, especially grafted plants or varieties that grow too tall for tomato stakes. It will only work with greenhouses that have crossties on each arch. To install: Run a purlin pipe the length of the row (over top of the crossties), then hang these trellises between every other plant. Brace first and last trellis (see picture for brace idea). Then, install tomato twine as needed to support the growing plants. Installing twine is easy, even once the plants are 5-plus feet tall. Cut as needed to fit structure heights. For taller structures, you may need to use short stakes for the first row or two of twine.

14208	108" Long, 12 hooks	\$10.55

## GREENHOUSE TOMATO TRELLISING HOOKS

For trellising greenhouse tomatoes and cucumbers, etc. Hang on a high wire. Or use S-hooks to hang from a pipe.

**Twine Hook:** Wire hook releases approximately 7" of twine each time they are turned over; the 11976 includes 30 ft. of UV-resistant white twine prewrapped on the hook and 10 ft. loose, so it can free-fall out of the case to speed installation.

**Roller Hook:** A labor-saving device to lower/lean crops smoothly controlled. Heavy-gauge wire frame supports a spool of twine with 100' of UV-resistant white twine. It easily clips over the wire. Concurrently releases twine while sliding down the wire to lower and lean trellised crops.

## GREEN EMBOSSED PLASTIC

The green plastic mulch gives the heat of clear plastic, but reduces weed growth, no fumigation needed. It combines the advantages of clear and black. Ideal for early season crops. While it has less weed pressure than clear, it tends to have more than black.

## BIOGUARD BIODEGRADABLE MULCH FILM

100% Biodegradable and compostable mulch film. Made of Mater-Bi, a starch based material. Novamont produces Mater-Bi with renewable resources such as starches from different non-GMO crops: corn & other cereals, potatoes and vegetable oils. Mater-Bi complies with international biodegradation and environmental standards, such as EN 13432 by Vinçotte and ASTM D6400 by BPI, which guarantee complete degradation in soil without any toxic residues. Not OMRI listed due to carbon black.

The degradation rate depends on film thickness, climate, and soil type. Starts breaking approximately 4-5 months on .6 mil, and 5-6 months on .8 mil. The manufacturer does not guarantee the film's life span due to different conditions such as non-compliance with laying and usage conditions, climatic conditions, etc. Lay relatively loose, and after a few hours or by the next day the mulch tightens and clings to the soil bed.

## ECO-ONE OXO-DEGRADABLE

Environmentally sound degradation. Laboratory studies indicate that this degradable plastic breaks down into CO<sub>2</sub>, H<sub>2</sub>O, and biomass without toxic residues. Degrades fully both above and below soil. Avoid excessive tension when laying and plant immediately after laying.

Liability from the manufacturer is limited to product defects to the extent of the value of the film. The breakdown period can vary depending on the conditions. **This film will break down faster in direct sunlight.** We primarily recommend this film for crops where the foliage is casting shade over the film, such as vine crops.

## CLEAR ECO-ONE FOR SWEET CORN

If you grow sweet corn under plastic, here's an option you don't want to miss. About 30-40 days after planting, or when the corn is 4-6 inches high, the plastic should start breaking up. You may have to slit it, depending on the weather. The advantage is that if the corn gets too high, you slit it and let it lay. At that point it keeps on putting heat in the soil.
